Students with good grades are likely to be more successful in all aspects of life. They are also likely to have low anxiety levels and depression, and are less prone to negativity.

13. Career advancement: Reading skills can provide new insights and knowledge that can help advance your career. Career advancement can help you achieve your life goals because it motivates you to better utilize new opportunities, rather than getting into your comfort zone and continuing to where you are at for too long. Advancing your career will give you additional motivation in all aspects of life.

14. Improved mental health: Reading benefits one to reduce stress, anxiety, and depression, promoting better mental health. After all, mental health is very important in everyone's life. It inspires us to flourish in the present while feeling better about our future. It also has the ability and capacity to handle stressful times and events in all areas of our lives.

15. Lifelong learning: Learning is a lifelong process that keeps evolving with time. One can never say that they know everything. Reading skills can help foster a love of learning and encourage lifelong learning. This helps discover new interests, builds confidence, helps learn practical skills, and improves adaptability.

SQ3R Reading Method

This useful strategy aids reading comprehension and is especially helpful for difficult textbook material. Each part of the process is helpful by itself, so do not feel that you must follow all of the steps. Use what works for you.

SQ3R is a reading comprehension method named for its five steps: survey, question, read, recite, and review.

This method especially beneficial to readers because: It activates knowledge and thinking about the text even before the student begins reading. It allows the student to review information as he is learning it. It creates study guides students can use to review for tests.

Survey

Before you begin a new chapter, skim the material and get a feel for the main topics and ideas in the text. The process below should take 5-10 minutes.

- Read the introduction
- Look at the headings and subheadings
- Look at the pictures, charts and graphs (anything visual)
- Read the chapter summary
- Look at the study questions at the end of the chapter

Question

Use questions to guide your reading.

- Take the first heading in the chapter and turn it into a question before reading the paragraphs in that section. For instance, if the heading is “A Limited Partnership”, read it as “What is a limited partnership?” Now you have created a purpose for reading because you are looking for the answer to the question.

Read

As you read look for answers to the questions you created. Use the following tips when reading:

- Usually the first sentence of each paragraph states the main idea.
- Look for transition words such as next, for example, in contrast, in addition, to help you follow the author’s point.

- Make notes in the margin or in a notebook as you read. Paraphrase main points and ideas; do NOT simply copy information from the textbook.
- Highlight only the most important points. Too much highlighting can make it difficult to separate the main point from support details.

Recite

After reading, look at the questions you created or those at the end of the chapter.

- Can you answer them? If you cannot, go back, reread the appropriate sections, and take notes.
- Take the time and recite or recall whatever you can remember as soon as you finish reading.

Review

- After you study new material, it is extremely important to conduct an overall review within 24 hours for maximum comprehension and memory. You can lose 80% of what you have learned if you do not review within the next day.

Reading is the foundation for success. When children develop different types of reading skills early in their lives, they are more likely to be successful. We have been through the stage where we started learning to read. Initially, it was words, then sentences and then phrases and finally paragraph. So one

There are four types of reading skills that every reader should know: skimming, scanning, intensive reading, and speed reading.

Skimming is a technique that allows you to quickly read through a text and pick out the main ideas. This is a useful skill when you need to get an overview of a text or when you’re looking for specific information.

Scanning is a technique that allows you to quickly read through a text and find specific information. This is a useful skill when you need to find specific information in a text.

Intensive reading is a technique that allows you to read a text slowly and carefully in order to understand all the details and nuances. This is a useful skill when you need to understand a text in depth.

Extensive reading/Speed reading is a technique that allows you to read a text quickly. This is a useful skill when you need to read a lot of information in a short amount of time.

Common Reading Problems

-

  Issues with decoding

  Beginner readers may struggle when they meet new or unfamiliar terms, but typically decoding becomes easier with repeated practice of reading the text out loud. If a child continues to struggle, there may be an underlying difficulty or a physical impairment that does not allow them to hear the sounds or see the letters.

-

  Poor comprehension of reading skills

  Some children can read like a pro but may not be able to tell you what they have read. This indicates a problem of incomprehension. These children may find the same difficulty when their teachers or parents read aloud.

-

  Speed

  The more children read, the more they expand their vocabulary. They begin to recognize more words by sight, enabling them to read faster. If speed is the issue with your child, slow processing of information could be the problem. Since reading is a cognitively demanding task, it involves holding information in the mind while continuously processing the text. This can exhaust the children with slow processing. Such children may require extra time to complete tasks that require extensive reading.

-

  Mixed reading difficulties

  Mixed reading problems in kids include decoding words and difficulty with comprehension. They have challenges when it comes to reading words, retaining information, and understanding the text. These problems could be due to a reading

disorder. Although some kids learn slower than others, if you notice any difficulty that affects your child's daily life, it should be evaluated by a professional.

-
- How To Improve Reading Skills Whatever reading problems your child is going through, there are always ways to help. Here are some ways you can help your child overcome their reading problems:
    - Take note of what you are seeing when your child is reading. When you observe your child, you may start seeing patterns. Talk with your child's teacher or caregiver to find out if they have observed something similar.
    - Work on building reading skills at home. Teach sight words for fluency and quick recall. Use flashcards, point out words on the hoardings, brand names, or store names
    - Always remember that if your child is struggling with any skill, it can make them feel inferior, and that can take a toll on their self-esteem. As your child works on their reading skills, make sure you praise their efforts and celebrate their small wins.
    - Choose books that contain detailed visual illustrations to help your child connect the text with the scene.
    - Get your child enrolled in online classes. PlanetSpark's programme uses the essential skills for reading success to unlock all aspects of reading focusing on phonics, comprehension, vocabulary, phonemic awareness, and reading for meaning.

Paragraph:

A paragraph is a short group of structured sentences with a single theme, cohesiveness, and flow. This article will provide you with an overview of the many types of paragraphs with examples of each.

A paragraph can be defined as a group of sentences related to the same topic, or it can be made up of just one sentence.

The type of category to be used depends on the purpose of the writing.

4 Types Of Paragraphs in Writing
There are four different types of paragraphs, which is defined as under:

Narrative	***used to tell a story or a sequence of events***
Descriptive	***used to describe a scene or an object***

Expository	***used to provide information, including facts, instructions, and definitions***
Persuasive	***used to share opinions and convince others to agree or take action***

1. Narrative Paragraph

Narrative paragraphs tell about an event or series of events, usually in chronological order. Most short stories and newspaper articles are examples of narrative writing.

Example: For next five years, our company named CaPs and another company named BuXER. BuXER went on to create the world's first computer-animated film, Toy Story, and is now the most successful animation studio in the world. In a remarkable turn of events, consumer electronic bought CaPs. We returned to that consumer electronic, and the technology we developed at CaPs is at the heart of consumer electronic current renaissance.

2. Descriptive Paragraph

Descriptive paragraphs do exactly what you think they do; they describe a person, an object, or a scene in detail.

Example: The room I found myself in was very large and high. The windows were long, narrow, and pointed, and a great distance from a dark apartment that was completely inaccessible inside. The faint light of the red light of the club passes through the concentrated pans, and served to distinguish enough of the brightest objects around; the eye, however, struggled in vain to reach the far corners of the room, or the edge of the curved and distressed roof of the house. Dark cloths hung on the walls. Ordinary furniture was extravagant, luxurious, antique and durable. Many books and musical instruments were scattered all over the place, but they failed to give strength to the scene. I felt I was breathing a spirit of grief. "A spirit of darkness, deep and unforgivable, hung over everyone."

3. Expository Paragraph

Expository paragraphs are used for explanation. They can list facts, give directions, or explain ideas. Writers also use expository paragraphs to define terms, make comparisons, and show cause and effect. Since information in expository writing can usually be put into categories, it often uses logical order.

Example: When students complete their assignments, they click the Mark "As done" on button letting their teacher know that they have finished. Note: The teacher does not receive an alert or email notification when work is turned on by the students, or marked as done. If a student is turning in late work, it is recommended that when the student finishes their work they should leave a comment for the teacher on late work or some other special circumstances.

This paragraph explains how turning in different types of assignments work. Besides, it gives some instructions to the teacher in compliance with some soft peculiarities.

4. Persuasive Paragraphs

Persuasive paragraphs are used to share an opinion about a particular subject. Writers of persuasive paragraphs try to convince readers to agree with the opinions in the paragraphs and, sometimes, to take action. A persuasive paragraph often uses an order of importance.

Example: If you choose to use your position and influence to raise your voice on behalf of those who have no voice; if you choose to point not only to the powerful, but also to the weak; If you keep the power of self-reflection in the lives of those who do not have your own benefits, then not only will your proud families celebrate your existence, but the billions and millions of people you have helped change their reality. We do not need magic to change the world with all the power we need within us: we have the power to think better. "

It is clear that the author has given much thought to how to organize such a powerful motivating section. There are many style tools used to make writing more convincing. This leads to the conclusion that the satisfactory category takes the same care and hard work.
What are the structure formats and styles of business letters?

There are three main styles of business letter: block, modified block, and semi-block styles. Each is written in much the same way, including the same information, but the layout varies slightly for each one. Dear Name: In this type of modified block letter, all the paragraphs line up at the left margin.

Writing Effective Letters

1. *Identify your audience. ...*
2. *Organize letters to meet your users' needs. ...*
3. *Start with the main message. ...*
4. *Letters may need a sympathetic opening. ...*
5. *After the main message, use an overview sentence. ...*
6. *Letter headings. ...*
7. *Use pronouns. ...*
8. *Choose the right tone for your letters.*

What is a business letter?

A business letter is a type of formal correspondence often sent from company to company, from company to client or from client to company. These letters generally follow a standard format and are usually written on company letterhead, particularly when sent physically through the mail rather than digitally through email.

Common types of business letters

You can use a business letter format for a variety of professional communication needs. Consider a few of the most common types of business letters you may encounter:

- *Sales letters: Companies use sales letters when soliciting business from other organizations, or occasionally, from individual customers.*
- *Order letters: Businesses send order letters when placing an order for a product or service. These letters include the specifics of the order and sometimes the payment.*
- *Complaint letters: Complaint letters are usually sent by consumers to businesses when they're unhappy with a service or product.*
- *Adjustment letters: Companies send adjustment letters in response to customer complaint letters. These letters usually provide a solution to the problem posed in the original complaint letter.*
- *Inquiry letters: Inquiry letters ask a question. You can use an inquiry letter for a number of different professional purposes.*
- *Follow-up letters: A follow-up letter is generally the second communication sent after initial contact.*

- ***Letters of recommendation: A letter of recommendation often comes from a prospective employee's previous employer to the business the candidate is applying to work for.***
- ***Acknowledgement letters: Businesses use acknowledgement letters to indicate they received a communication or request, but they have not yet made a decision or taken action.***
- ***Cover letters: Both businesses and job seekers use cover letters to indicate what's included in a package or collection of documents.***
- ***Letters of resignation: Employees send letters of resignation to their employers when they're planning to leave their job.***

Components of a business letter

Each of these types of business letters, while providing different information to the recipient, usually follows a similar format and includes the same basic components. When writing a business letter of any kind, anticipate including these elements:

- ***Sender's address: The sender's address is your address or the address of your business.***
- ***Date: Include the date you wrote and sent the letter.***
- ***Recipient's address: This is the address of the person you're sending the letter to.***
- ***Salutation: Use a formal greeting along with the recipient's name.***
- ***Introduction: The introductory paragraph of the letter introduces the purpose of the correspondence to the recipient.***
- ***Body: The body paragraph or paragraphs provide details about the letter's subject or purpose.***
- ***Closing statement: The closing paragraph of the letter summarizes and concludes the message.***
- ***Complimentary close: Use a professional phrase along with your signature.***
- ***Enclosures: If you're including any additional documents, like a sales brochure, a resume or an itemized receipt, specify that under the enclosures heading.***

- ***What is the structure of a report?***
- ***Reports are formal documents which can include headings, sub-headings, numbered sections, bullet point text, and graphics such as flow charts, diagrams or graphs. All of these devices may be used to help the reader navigate the report and understand its content.***

Though different business organizations may have different report format or structure based on their requirement, still in general, the basic structure of a business report is as below:

- ***Report title or heading: This includes the basic name of the report. It may also include the reporter's name and report presentation date. It should be written in a clear format.***
- ***Index table: In case of lengthy reports, there should be an index table of contents. This includes different topics that are covered in the report, including the main headings and sub-headings. The page number can also be part of this.***
- ***Executive summary: This includes the purpose or objective of a report. A good summary is the brief of the report's background, the issues that occurred, and possible recommended solutions for that. Different assumptions and limitations are also part of this. Usually, the summary is prepared in the last but presented to senior management on a priority basis as they have a shortage of time to study the whole report.***
- ***Introduction: This covers any background information and further developments in a more detailed way. This includes the material and further chapters of the report.***

- ***Information collection procedure: Includes the description of information gathering methods and any limitations. The different corrective measures taken to remove these limitations can also form the part of the report.***
- ***Findings of report: The report findings should be represented with sufficient data to explain that enough research was conducted. The recommendations of the report can be justified by including customer reports, opinions of industry experts, statistics, and observations.***
- ***Conclusion of the report: This covers the result or outcome of the report from the findings and recommendations. It is the assessment of the current scenario as per the reporter's observations and findings.***
- ***References: Different resources that are used in report preparation come under a reference list. Different references like books, any online material or article are being used as information that can be utilized in the report formation.***
